

NMN Beginner's Guide

Everything you need to know before taking your first NMN supplement.

What is NMN?

Nicotinamide Mononucleotide (NMN) is a naturally occurring molecule that your body converts directly into NAD⁺ (nicotinamide adenine dinucleotide) — a coenzyme found in every cell of your body. NAD⁺ is essential for energy production, DNA repair, and cellular health. The problem: NAD⁺ levels decline by 50% between age 20 and 60.

Key Fact: NMN is the most direct precursor to NAD⁺. Unlike other precursors (NR, niacin, tryptophan), NMN requires fewer conversion steps, making it more efficient at raising NAD⁺ levels.

Why Do NAD⁺ Levels Drop?

- **Aging** — Your body produces less NAD⁺ naturally after 30
- **Chronic stress** — Cortisol depletes NAD⁺ reserves
- **Poor sleep** — NAD⁺ restoration happens during deep sleep
- **Alcohol consumption** — Alcohol metabolism consumes NAD⁺
- **UV exposure** — Sun damage triggers DNA repair that uses NAD⁺

Recommended Dosage

Age Group	Starting Dose	Optimal Dose
Under 35	250mg/day	250-500mg/day
35-50	250mg/day	500mg/day
50-65	500mg/day	500-750mg/day
65+	500mg/day	500-1000mg/day

Best Time to Take NMN

Morning, empty stomach. NMN is best absorbed on an empty stomach because food interferes with its transport into cells. Take it first thing when you wake up, at least 30 minutes before breakfast. Avoid taking it in the evening — NAD⁺ promotes cellular activity, which can interfere with sleep.

What to Expect (Timeline)

- **Week 1-2:** Most people notice nothing yet. Keep going.
- **Week 3-4:** Subtle improvements in morning energy and mental clarity
- **Week 6-8:** More noticeable changes — better exercise recovery, steadier energy throughout the day
- **Month 3+:** Full effect — improved sleep quality, skin appearance, cognitive function

 **Important:** NMN is not a stimulant. You won't feel a "jolt" like caffeine. The benefits are cumulative and gradual — measured over weeks and months, not minutes.

Stacking: NMN + CoQ10 + Vitamin D3

These three supplements work synergistically:

- **NMN** — Boosts NAD+ for cellular energy
- **CoQ10** — Supports mitochondrial function (the energy factories of your cells)
- **Vitamin D3** — Essential for immune function and calcium absorption, synergistic with NAD+ metabolism
